## **General Use and Safety Guidelines**

### **ECO, SESCO, FAF-60**

1. Before initial use, custom cut hard-wood boards long enough and wide enough to fit inside the bottom U-channels. Cut the boards so that a 90-degree angle is attained between the uprights and the bottom U-channels. This will help the product being stored to remain safely against the back uprights.
2. Maximum weight capacity for the ECO and FAF-60 is 24,000 lbs., 12,000 lbs. per side; Maximum weight capacity for the SESCO is 12,000 lbs.
3. As much as possible, store equal weight on opposite sides of the A-Frame (ECO & FAF-60). Always center the product from left to right.

**SAFETY WARNING: THESE PRODUCTS ARE NOT INTENDED FOR TRANSPORT.**

**IMPORTANT NOTE: If you have questions concerning any of the above guidelines, or any product not specifically mentioned, please contact Groves Incorporated immediately for further information.**
